Hanger System Spray Washing and Phosphating Line

HANGWASH

Hanger System Spray Washing and Phosphating Line

For Videos

Application Areas

- These are washing systems used for surface cleaning of work pieces suitable for hanger system before coating and painting.
- It consists of washing, rinsing, phosphating and drying process steps as required.

Working Principle

- The parts are transferred by hanging them to the cones with the conveyor.
- Wide and effective spray washing is provided with nozzles and pumps positioned according to the material properties, geometry, and pollution of the work pieces.
- Tunnel length and hanger system are determined in accordance to the work pieces and the capacity needed.
- Parts that require sensitive cleaning are available in all "Ultrasonic Tunnel" designs.
