SOLWASH

Machine is a hermetic, closed loop washing machine for mass production. Utilizes only chlorinated solvents or modified alcohol.

SOLWASH

Machine is a hermetic, closed loop washing machine for mass production. Utilizes only chlorinated solvents or modified alcohol.

For Videos

Application Areas

- Precision cast parts, copper, brass parts, parts that require precision washing and drying. Metal Processing Industry - Automotive Industry - Cleaning of Printing machine parts.

Working Principle

- The parts are loaded in to the basket sitting in front of the machine roller conveyor. The basket is transferred manually or automatically inside the washing chamber.
- The process is started by selecting the required program from the PLC menu. Basic process flow: Spray washing - Ultrasonic washing - flushing - drying
- The solvent is automatically regenerated and recycled during running the machine.

Solvents Used

- Modified alcohols, Trichlorethylene, Perchlorethylene
